## $\overline{\text { Applications }}$

Tested Applications: ELISA
Cited Applications:
WB
Species Specificity:
human, mouse
Cited Species:
rat

Background Information
MacMARCKS is a member of MARCKS family of PKC substrate. It is widely used in the signal transduction studies as an indictor of PKC activation. The protein has a calculated molecular weight of 20 kDa and an apparent molecular weight of 42-45 kDa in different species on SDS PAGE. MacMARCKS functions in many aspects of cell physiology including integrin activation, cell spreading and phagocytosis. Its functions are though to associate with its ability in binding and regulating actin and microtubule cytoskeleton. Current evidence indicated that this protein also involved controls membrane fluidity and molecular mobility of membrane proteins

Storage

| Author | Pubmed ID | Journal | Application |
| :--- | :--- | :--- | :--- |
| Mingyue Zhong | 35726797 | Food Funct | WB |

Storage:
Store at $-20^{\circ} \mathrm{C}$. Stable for one year after shipment.

Storage Buffer:
PBS with $0.02 \%$ sodium azide and $50 \%$ glycerol pH 7.3 .
Aliquoting is unnecessary for $-20^{\circ} \mathrm{C}$ storage

Selected Validation Data
