Background Information

Apelin, isolated from bovine stomach tissue extracts, is recognized as the endogenous ligand of the angiotensin-like-receptor 1 (APJ), and the human orphan G-protein-coupled receptor. Apelin is widely expressed in various organs such as the heart, lung, kidney, liver, adipose tissue, gastrointestinal tract, brain, adrenal glands, endothelium, and human plasma. Apelin has been found to be a potent stimulator of cardiac contractility and may function in the regulation of the cardiovascular system. Apelin is also known to be involved in the maintenance of INS sensitivity and play an important role in liver disease.
