## Background Information

The AAAS gene product is the 60 kDa nuclear pore complex (NPC) protein alacrima-achalasia-adrenal insufficiency neurological disorder (ALADIN). AAAS mRNA and the ALADIN protein are ubiquitously expressed with predominance in the adrenal and central nervous system structures in human and rat. ALADIN, a Tryptophan-Aspartic acid (WD) repeat containing protein, was the first nuclear pore complex protein to be associated with hereditary neurodegenerative disease and the only nuclear pore complex protein to be associated with hereditary adrenal disease. ALADIN's precise function at the nuclear pore complex is unknown. Most naturally occurring AAAS mutations result in mislocalization of the abnormal ALADIN protein (mainly into the cytoplasm), implying that correct NPC targeting is vital for its function. ## Selected Validation Data

Immunohistochemical analysis of paraffin-embedded human stomach cancer tissue slide using 15127-1-AP (ALADIN antibody) at dilution of 1:200 (under 40x lens). Heat mediated antigen retrieval with Tris-EDTA buffer (pH 9.0).

Various lysates were subjected to SDS PAGE followed by western blot with 15127-1-AP (ALADIN antibody) at dilution of 1:3000 incubated at room temperature for 1.5 hours.
