|                        | CD8b is the beta chain of CD8, a transmembrane glycoprotein that is predominantly expressed on the surface of cytotoxic T cells, and can also be found on natural killer cells, cortical thymocytes, and dendritic cells. CD8 serves as a co-receptor for the T cell receptor (TCR). Both CD8 and TCR recognize antigens displayed by an antigen presenting cell (APC) in the context of class I MHC molecules. CD8 plays a role in T cell development and activation of mature T cells. |  |   |   |  |
| Background Information | a co-receptor for the T cell recepto<br>cell (APC) in the context of class I   | r (TCR). Both CD8 and                                      | TCR recognize ant   | igens displayed by an antigen presenting  |  |
