| Background Information | CXCL2, also known as macrophage inflammatory protein 2-alpha (MIP2-alpha), is a member of CXC chemokine family that binds to CXC chemokine receptor 2 (CXCR2). CXCL2 is mainly produced by macrophages, endothelial cells, epithelial cells and tumor cells. CXCL2 plays important roles in various biological progresses such as angiogenesis, inflammation, immune response and cancer biological behaviors. Under inflammatory conditions in CNS, microglia and astrocytes may secrete CXCL2 as well as other chemokines, which induces chemotaxis and infiltration of circulatory neutrophils. Indeed, previous studies suggest that CXCL2 is involved in Alzheimer diseas multiple sclerosis and brain ischemia. |                                      |   |                      |

This product is exclusively available under Proteintech Group brand and is not available to purchase from any other manufacturer.

## Selected Validation Data

Various lysates were subjected to SDS PAGE followed by western blot with 26791-1-AP (CXCL2 antibody) at dilution of 1:500 incubated at room temperature for 1.5 hours.
