## **Background Information**

Alpha-taxilin is a member of the taxilin family which consist of at least three members: alpha-, beta- and gammataxilins. Alpha-taxilin was identified as a novel binding partner of the syntaxin family, which is involved in intracellular vesicle traffic. Alpha-taxilin is ubiquitously expressed. It plays an essential role for release of HBV-DNA containing particles. Alpha-taxilin encompasses 546 aa and has a calculated molecular weight of 62 kDa. It migrates on SDS-PAGE with an apparent molecular weight of 75 kDa. (PMID: 12558796; 23816704)
