| :--- | :--- |
| WB,ELISA | WB: SH-SY5Y cells, human brain tissue, mouse brain |
| Species Specificity: | tissue |
| human, mouse, rat |  |

GDP dissociation inhibitors (GDIs) are proteins that regulate the GDP-GTP exchange reaction of members of the rab family. GDIs can bind and release GDP-bound Rab proteins from membranes. Two GDI proteins towards different Rab proteins have been identified. GDI1 interacts with almost all of the Rab proteins, while GDI2 interacts with Rabll but not Rab3A. GDI1 is expressed primarily in neural and sensory tissues and also in secretory cells, displaying a diffuse, cytoplasmic distribution in cells. It runs as a 55kda protein in SDS-PAGE. (PMID: 7929030,PMID: 19570034). Defects in GDI 1 are the cause of mental retardation X-linked type 41 (MRX41). Defects in GDI1 are the cause of mental retardation X-linked type 48 (MRX48). The antibody is specific to GDI 1 . And it has no cross reaction to GDI 2.

Storage
Storage:
Store at $-20^{\circ} \mathrm{C}$.
Storage Buffer:
PBS with $0.02 \%$ sodium azide and $50 \%$ glycerol pH 7.3 .
Aliquoting is unnecessary for $-20^{\circ} \mathrm{C}$ storage

Selected Validation Data

SH-SY5Y cells were subjected to SDS PAGE
followed by western blot with 55214-1-AP (GDI1 antibody) at dilution of 1:1000 incubated at room temperature for 1.5 hours.
