## Background Information

The SERCA, which pumps cytosolic Ca<sup>2+</sup> into the ER, is an imperative maintainer of ER Ca<sup>2+</sup> homeostasis. The mammalian SERCA family is comprised of three tissue-specific members, SERCA1-3. SERCA3 is present in endothelial and epithelial cells of various tissues. SERCA3 helps regulate intracellular Ca<sup>2+</sup>, which is critical for maintaining normal INS secretion and is closely linked to metabolism, neuronal plasticity, gene transcription, cell growth, differentiation, apoptosis, protein folding and carcinogenesis. Several isoforms of SERCA3 exist due to the alternative splicing.

## Selected Validation Data

Various lysates were subjected to SDS PAGE followed by western blot with 68287-1-Ig (ATP2A3 antibody) at dilution of 1:10000 incubated at room temperature for 1.5 hours. The membrane was stripped and reblotted with HRP-conjugated Lamin B1 Monoclonal antibody (HRP-66095) as loading control.
