Background Information

The GAD1(glutamate decarboxylase 1) gene encodes 67 kDa glutamic acid decarboxylase isoform (GAD67), the rate-limiting enzyme responsible for γ -aminobutyric acid (GABA) biosynthesis from glutamic acid and the major GAD isoform in the human brain for early brain development(PMID:21302352). It is also potentially involved in variety of skin activities. It belongs to the group II decarboxylase family.
