Background

Numbl (also known as numlike or Nbl), as a conserved homolog of *Drosophila* Numb, is specifically expressed in the brain. Numbl is a cytoplasm protein and has redundant functions in embryonic neurogenesis. It plays an important role in ependymal wall integrity and subventricular zone neuroblast survival. However, its expression and function in the central nervous system lesion are still unclear.

Synonyms

CAG3A, CTG3a, NBL, numb homolog (*Drosophila*) like, Numb like protein, NUMB R, Numb related protein, NUMBL, NUMBLIKE, NUMBR, TNRC23
