Background Information

CXCL 14 (C-X-C motif chemokine 14) is a small inducible cytokine, and may be a potent chemoattractant for neutrophils. CXCL14 possesses a destruction box (D-box) domain which acts as a recognition signal for degradation via the ubiquitin-proteasome pathway. CXCL14 is widely expressed in normal tissues including heart, brain, placenta, lung, liver, skeletal muscle, kidney and pancreas without inflammatory stimuli. It is dispensable for dendritic cell function and localization within peripheral tissues. In localized prostate cancer, CXCL14 mRNA was significantly upregulated and positively correlated with Gleason score.
