Background Information

TCL1A, also named as TCL1 and p14 TCL1, enhances cell proliferation, stabilizes mitochondrial membrane potential and promotes cell survival. TCL1A immunodetection is an independent marker of adverse outcome that could be used in routine settings for the management of DLCL patients. TCL1A expression is correlated with shorter time to treatment in chronic lymphocytic leukemia cases and shorter Lymphoma-specific survival in mantle cell lymphoma series. It is a potential therapeutic target.
