Background Information

HAUS1 is a subunit of the human augmin complex that is involved in microtubule generation and mitotic spindle formation (PMID:27036161). In addition, HAUS1 may play a major role in centrosome integrity and completion of cytokinesis. The depletion of HAUS1 in cells decreases the G2/M cell compartment and induces apoptosis. High HAUS1 expression was associated with several tumour-infiltrating immune cells such as Th2 cells, macrophages, and activated dendritic cells (PMID:35865089). 11094-2-AP can detect the 32 kDa band, which is consistent with the calculated MW.
