## Background Information

Dysbindin, encoded by DTNBP1 (dystrobrevin binding protein 1), is a synaptic protein which is expressed in diverse neuronal populations throughout the brain. Genetic variation in DTNBP1 is associated with schizophrenia. Reduced expression of dysbindin has been reported in the dorsolateral prefrontal cortex (DLPFC) of schizophrenia cases. Several isoforms of dysbindin exist: 48-50 kDa of dysbindin-1A, 35-38 kDa of dysbindin-1B, and 30-32 kDa of dysbindin-1C. This antibody recognizes all of isoforms of dysbindin. (19617633)
