Background Information

MBD4, also named as MED1, is a 580 amino acid protein, which interacts with MLH1. MBD4 as a mismatch-specific DNA N-glycosylase is involved in DNA repair and has thymine glycosylase activity and is specific for G:T mismatches within methylated and unmethylated CpG sites. MBD4 can also remove uracil or 5-fluorouracil in G:U mismatches. MBD4 exists some isoforms with MV 66 kDa and 30 kDa (The identification of a novel alternatively spliced form of the MBD4 DNA glycosylase).
