For Research Use Only

## GPSM2 Polyclonal antibody Catalog Number: 11608-2-AP Featured Product 7

Basic Information	Catalog Number: 11608-2-AP	GenBank Accession Number: BC027732	Purification Method: Antigen affinity purification
	Size: 413 µg/ml	Genel D (NCBI): 29899	
	Source: Rabbit	UNIPROT ID: P81274	
	lsotype: IgG Immunogen Catalog Number: AG2167	Full Name: G-protein signaling modulator 2 (AGS3-like, C. elegans)	
		Calculated MW: 75 kDa	
Applications	Tested Applications: ELISA		
	Cited Applications: WB, IHC, IF, IP		
	Species Specificity: human		
	Cited Species: human, mouse		
	GPSM2 belongs to a family of proteins that modulate activation of G proteins. GPSM2 assists in the exchange of guanine nucleotides, and allows extracellular signals to be transmitted to cells via cell surface, and ultimately plays a key role in the activation of G-proteins. Therefore, GPSM2 is a critical factor for the stability of cell divisio Some recent studies have shown that GPSM2 messenger RNA (mRNA) is overexpressed and plays a positive role i the development of certain tumors, such as liver cancer, pancreatic cancer, breast cancer. It also plays a role in neuroblast division and in the development of normal hearing. Mutations in GPSM2 are associated with autosoma recessive nonsyndromic deafness (DFNB82), which is a form of non-syndromic deafness characterized by prelinguisticated, severe, sensorineural hearing loss.		
Background Informatior	glamme interectives, and attorns e plays a key role in the activation Some recent studies have shown i the development of certain tumor neuroblast division and in the dev recessive nonsyndromic deafness	of G-proteins. Therefore, GPSM2 is a cr that GPSM2 messenger RNA (mRNA) is 's, such as liver cancer, pancreatic canc velopment of normal hearing. Mutation (DFNB82), which is a form of non-sync	to cells via cell surface, and ultimately itical factor for the stability of cell divisio overexpressed and plays a positive role er, breast cancer. It also plays a role in ns in GPSM2 are associated with autosom
	glamme interectives, and attorise plays a key role in the activation Some recent studies have shown i the development of certain tumor neuroblast division and in the dev recessive nonsyndromic deafness bilateral, severe, sensorineural he	of G-proteins. Therefore, GPSM2 is a cr that GPSM2 messenger RNA (mRNA) is 's, such as liver cancer, pancreatic canc velopment of normal hearing. Mutation (DFNB82), which is a form of non-sync	to cells via cell surface, and ultimately itical factor for the stability of cell divisio overexpressed and plays a positive role er, breast cancer. It also plays a role in ns in GPSM2 are associated with autosom
	Justice of the second s	of G-proteins. Therefore, GPSM2 is a cr that GPSM2 messenger RNA (mRNA) is 's, such as liver cancer, pancreatic canc velopment of normal hearing. Mutation (DFNB82), which is a form of non-sync earing loss.	to cells via cell surface, and ultimately itical factor for the stability of cell divisio overexpressed and plays a positive role er, breast cancer. It also plays a role in 15 in GPSM2 are associated with autosom fromic deafness characterized by preling
	Justice of the second s	of G-proteins. Therefore, GPSM2 is a cr that GPSM2 messenger RNA (mRNA) is s, such as liver cancer, pancreatic canc relopment of normal hearing. Mutation (DFNB82), which is a form of non-sync earing loss. Pubmed ID Journal	to cells via cell surface, and ultimately itical factor for the stability of cell divisio overexpressed and plays a positive role er, breast cancer. It also plays a role in is in GPSM2 are associated with autosom fromic deafness characterized by prelinge Application
Background Information	guarmine interectives, and attorises   plays a key role in the activation   Some recent studies have shown in   the development of certain tumor   neuroblast division and in the dev   recessive nonsyndromic deafness   bilateral, severe, sensorineural her   Author   Yecheng Jin   Yoni Bhonker	of G-proteins. Therefore, GPSM2 is a cr that GPSM2 messenger RNA (mRNA) is 's, such as liver cancer, pancreatic canc velopment of normal hearing. Mutation (DFNB82), which is a form of non-sync earing loss. Pubmed ID Journal 27255603 Sci Rep	to cells via cell surface, and ultimately itical factor for the stability of cell divisio overexpressed and plays a positive role er, breast cancer. It also plays a role in ns in GPSM2 are associated with autosom fromic deafness characterized by preling Application IF
