Background Information

G protein subunit gamma-T1(GNGT1) is encoded by the transducin gamma-subunit gene, which localized on human chromosome 7q21.3, participating in various transmembrane signaling systems. Particularly, GNGT1 gene is specific to retinal rod photoreceptors. Present polyclonal anti-GNGT1 antibody (11884-1-AP) is produced by immunizing rabbits with full-length chain of GNGT1 and detects an 8 kDa band in mouse retinal tissue.
