Background Information

MAPKSP1, also named as mitogen activated protein kinase kinase 1 interacting protein 1, Map2k1ip1, MEK partner 1, Lamtor3 and MP1. It was first identified as a scaffold protein enhancing the efficiency of the MAPK pathway by facilitating the interaction between MEK1 and ERK1 upon serum stimulation (PMID: 9733512). Later, it has been demonstrated that MAPKSP1 enhances activation of both ERK1 and ERK2 as a response to EGF (PMID: 12479806) and fibronectin (PMID: 15923628). MAPKSP1 is involved in regulating endosomal signaling (PMID: 17178906), and a role in cancer, via MEK and ERK hyperactivation, has been demonstrated in pancreatic tumorigenesis (PMID: 24209743). MAPKSP1 has two isoforms with the molecular weight of 13-14 kDa.
