Background Information

PTMS, also named as Parathymosin, is a small nuclear protein that can physically interact with glucocorticoid receptors (GR) and histone H1, respectively, and can serve as a coactivator of GR (PMID: 16150697; PMID: 15716277). It is widely distributed in mammalian tissues. Catalog# 12106-1-AP is a rabbit polyclonal antibody raised against the full-length of human PTMS. The MW of this protein is 12 kDa, and this antibody specially recognises the 12 kDa protein.
