Background Information

MCM10, also named as HsMCM10, belongs to the MCM10 family. It acts as a replication initiation factor that brings together the MCM2-7 helicase and the DNA polymerase alpha/primase complex in order to initiate DNA replication. Additionally, it plays a role in preventing DNA damage during replication and is essential for the integrity of the RECQ4-MCM replicative helicase complex. It mediates RECQ4 association with MCM2-7 helicase complex during DNA replication.
