## Background Information

PANX1, also named as MRS1, belongs to the pannexin family. It plays a role as a Ca<sup>2+</sup>-leak channel to regulate ER Ca<sup>2+</sup> homeostasis. It is a structural component of the gap junctions and the hemichannels. PANX1 induced the formation of intercellular channels with characteristics of gap junctions. PANX1 is 48-kDa protein which contains 4 transmembrane domains and cytoplasmic N and C termini. It is a mediator of find-me signal/nucleotide release from apoptotic cells. Western blot for Panx1 was also seen in two bands at 45~50 kDa and ~90 kDa. The band of ~90 kDa corresponding to the Panx1 dimer size. (PMID: 24590064, PMID: 19009624)
