Background Information

Human SCO1 and SCO2 are metallochaperones that are essential for the assembly of the catalytic core of cytochrome c oxidase (COX). SCO1 appears to be involved in the folding and assembly of cytochrome oxidase subunit II, and possibly of other proteins of this subcompartment. It is a 33 kDa protein which displays limited homology to members of the DnaJ family (PMID:14731768). It is also named as SCOD1 and belongs to the SCO1/2 family. It can exist as a homodimer (PMID:16735468). Defects in SCO1 are a cause of mitochondrial complex IV deficiency (MT-C4D).

Selected Validation Data

Various lysates were subjected to SDS PAGE followed by western blot with 12614-1-AP (SCO1 antibody) at dilution of 1:800 incubated at room temperature for 1.5 hours.

Immunohistochemical analysis of paraffin-embedded human stomach cancer tissue slide using 12614-1-AP (SCO1 antibody) at dilution of 1:100 (under 20x lens). Heat mediated antigen retrieval with Tris-EDTA buffer (pH 9.0).
