Background Information

SMARCD3 is a component of the SWI/SNF (mating type switching/sucrose non-fermenting) chromatin remodeling complex, which evolutionarily conserved from yeast to human, and all complexes contain a core set of conserved components, including BRG1/Brm-associated factors (BAFs) and a DNA-dependent SWI2/SNF2-like ATPase, which enables chromatin remodeling. SMARCD3 isoforms bind to several nuclear receptors and transcription factors of various families. SMARCD3 proteins interact in a ligand-independent manner with peroxisome proliferator-activated receptor gamma and enhance its transcriptional activity.
