Background Information

ZBP1(Z-DNA-binding protein 1), also named as DAI or DLM-1, is a nucleic acid sensor with some isoforms. It has been reported that ZBP1 can sense the viral nucleic acids of viruses and induce the death of infected cells to prevent virus transmission. ZBP1 can be activated and causes necrocytosis without viral infection, which is associated with nuclear Z-form nucleic acids. ZBP1 can be detected 42 kDa, 55 kDa, 68 kDa isoforms (PMID: 37012234, PMID: 9121465).
