BCKDHB Polyclonal antibody Catalog Number:13685-1-AP 10 Publications

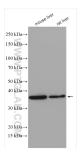

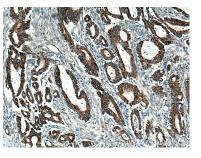

Basic Information	Catalog Number: 13685-1-AP	GenBank Accession Number: BC040139	Purification Method: Antigen affinity purification	
	Size:	GeneID (NCBI):	Recommended Dilutions:	
	350 µg/ml	594	WB 1:500-1:2000 IHC 1:50-1:500	
	Source: Rabbit	UNIPROT ID: P21953	THE 1.30-1.300	
	lsotype:	Full Name:		
	lgG	branched chain keto acid dehydrogenase E1, beta polypeptide Calculated MW:		
	Immunogen Catalog Number: AG4552			
		392 aa, 43 kDa		
		Observed MW:		
		37 kDa		
Applications	Tested Applications:	Positive Controls:		
	WB, IHC, ELISA Cited Applications: WB, IHC, RIP		mouse liver tissue, Transfected HEK-293 cells, rat	
		liver t	sue man colon cancer tissue, human stomach	
	Species Specificity: tissue human, mouse, rat			
	Cited Species:			
	human, mouse, sheep			
	Note-IHC: suggested antigen retrieval with TE buffer pH 9.0; (*) Alternatively, antigen retrieval may be performed with citrate buffer pH 6.0			
	Branched-chain alpha-keto acid dehydrogenase E1 component beta chain (BCKDHB; BCKDE1B; BCKDH E1-beta) is a subunit of the BCKDH complex, which is a mitochondrial enzyme in the degradation pathway for branched-chain amino acids (BCAA). Together with BCKDHA, BCKDHB forms the E1 subunit of this complex, whereas DBT and DLD are the E2 and E3 subunits, respectively. A deficiency of the BCKDH complex in humans causes maple syrup urine disease (MSUD), a severe neurometabolic disorder diagnosed by the detection alloisoleucine in plasma (MIM 248600). (PMID: 30709776)			
Background Information	are the E2 and E3 subunits, respec disease (MSUD), a severe neurome	tively. A deficiency of the BCKDH	ubunit of this complex, whereas DBT and DLD complex in humans causes maple syrup urine	
	are the E2 and E3 subunits, respec disease (MSUD), a severe neuromo 248600). (PMID: 30709776)	tively. A deficiency of the BCKDH	ubunit of this complex, whereas DBT and DLD complex in humans causes maple syrup urine	
	are the E2 and E3 subunits, respec disease (MSUD), a severe neuromo 248600). (PMID: 30709776)	tively. A deficiency of the BCKDH etabolic disorder diagnosed by the	ubunit of this complex, whereas DBT and DLD complex in humans causes maple syrup urine e detection alloisoleucine in plasma (MIM Application	
	are the E2 and E3 subunits, respectively as the E2 and E3 subunits, respectively as the end of the	tively. A deficiency of the BCKDH etabolic disorder diagnosed by the Pubmed ID Journal	ubunit of this complex, whereas DBT and DLD complex in humans causes maple syrup urine e detection alloisoleucine in plasma (MIM Application

This product is exclusively available under Proteintech Group brand and is not available to purchase from any other manufacturer.

Selected Validation Data

Various lysates were subjected to SDS PAGE followed by western blot with 13685-1-AP (BCKDHB antibody) at dilution of 1:1000 incubated at room temperature for 1.5 hours. Immunohistochemical analysis of paraffinembedded human colon cancer tissue slide using 13685-1-AP (BCKDHB antibody) at dilution of 1:200 (under 10x lens). Heat mediated antigen retrieval with Tris-EDTA buffer (pH 9.0).
