| Background Information   | DCP1B belongs to DCP1 family. DCP1B may play a role in the degradation of mRNAs, both in normal mRNA turnover<br>and in nonsense-mediated mRNA decay. It may remove the 7-methyl guanine cap structure mRNA molecules,<br>yielding a 5'-phosphorylated mRNA fragment and 7m-GDP. DCP1B has 2 isoforms with the molecular mass of 56<br>and 68 kDa. DCP1B is associated with DM-related atherogenesis (PMID:33195466). |   |                                  |   |                      |                      |  |                    |

This product is exclusively available under Proteintech Group brand and is not available to purchase from any other manufacturer.

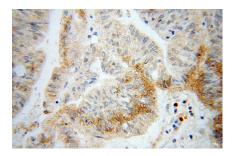

## Selected Validation Data

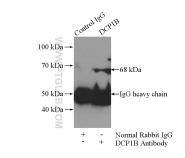

Various lysates were subjected to SDS PAGE followed by western blot with 13863-1-AP (DCP1B antibody) at dilution of 1:3000 incubated at room temperature for 1.5 hours.

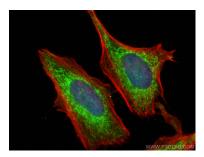

Immunohistochemical analysis of paraffinembedded human liver cancer using 13863-1-AP (DCP1B antibody) at dilution of 1:100 (under 10x lens).

Immunohistochemical analysis of paraffinembedded human liver cancer using 13863-1-AP (DCP1B antibody) at dilution of 1:100 (under 40x lens).

IP result of anti-DCP1B (IP:13863-1-AP, 4ug; Detection:13863-1-AP 1:500) with HeLa cells lysate 1520ug.

Immunofluorescent analysis of (4% PFA) fixed HeLa cells using DCP1B antibody (13863-1-AP) at dilution of 1:400 and CoraLite® 488-Conjugated AffiniPure Goat Anti-Rabbit IgG(H+L), CL594phalloidin (red).
