## Background Information

SPAG8, also named as Sperm-associated antigen 8 or HSD-1, is a 426 amino acid protein, which is expressed in testis (germ cells), but not in liver, kidney, prostate and small intestine. SPAG8 may play a role in fertility and microtubule formation through interaction with RANBP9. SPAG8 as testis-specific protein is produced during male germ cell differentiation and functions in a germ cell type- and stage-specific manner during spermatogenesis.
