## Background Information

NFRKB (Nuclear Factor Related to KappaB Binding Protein) plays a role in the recombination of DNA, it helps in the regulation of transcription, DNA-templated, and transcription by RNA polymerase II, and is involved in the regulation of inflammatory responses. It also regulates protein deubiquitination, which is important for protein stability and function.

## Selected Validation Data

Various lysates were subjected to SDS PAGE followed by western blot with 14086-1-AP (NFKB antibody) at dilution of 1:2000 incubated at room temperature for 1.5 hours. This data was developed using the same antibody clone with 14086-1-PBS in a different storage buffer formulation.
