Background Information

PNPLA6(patatin-like phospholipase domain-containing protein 6) is also named as NTE(neuropathy target esterase) and belongs to the NTE family. It plays an important role in motor neuron development and implicated overexpression of BMP signaling(PMID:22996643). Defects in PNPLA6 are the cause of spastic paraplegia autosomal recessive type 39 (SPG39)(PMID:18313024). This protein has a glycosylation site that it can be glycosylated(PMID:9576844). It has 3 isoforms produced by alternative splicing.
