Background Information

SLC38A3, also known as SNAT3 or SN1, belongs to the SLC38 family of sodium-coupled neutral amino acid transporters. SLC38A3 mediates glutamine transport with sodium and proton coupled manner, and it contributes to ammonia metabolism in the liver and brain. SLC38A3 is highly expressed in the liver and brain astrocytes, with modest expression in the kidney, heart, and muscle. SLC38A3 may migrate higher than the predicted 56 kDa due to the glycosylation.
