Background Information

Protein phosphatase, Mg²⁺/Mn²⁺ dependent 1K (PPM1K), is a member of the PPM family of Mn²⁺/Mg²⁺-dependent protein phosphatases. PPM1K, essential for cell survival and development, is targeted to the mitochondria where it plays a key role in regulation of the mitochondrial permeability transition pore. PPM1K is essential for the regulation and nutrient-induced activation of the branched-chain alpha-keto acid dehydrogenase complex (BCKD or BCKDC), which catalyzes the breakdown of branched-chain amino acids (BCAA).
