Background Information

The metastasis-associated (MTA) family contains three members, MTA1, MTA2 and MTA3 (PMID:12167865). Metastasis-associated protein 3 (MTA3) is a cell-type specific component of the Mi-2-NURD transcriptional co-repressor complex. It has a role in maintenance of the normal epithelial architecture through the repression of SNAIL1 transcription in a histone deacetylase-dependent manner, and thus the regulation of E-cadherin levels.
