LEF1 Polyclonal antibody Catalog Number: 14972-1-AP Featured Product

Featured Product

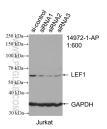

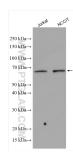

Basic Information	Catalog Number: 14972-1-AP	GenBank Accession Number: BC050632	Purification Method: Antigen affinity purification	
	Size:	GenelD (NCBI):	Recommended Dilutions:	
	700 µg/ml	51176	WB 1:1000-1:4000	
	Source: Rabbit	ENSEMBL Gene ID: ENSG00000138795	IP 0.5-4.0 ug for 1.0-3.0 mg of total protein lysate	
	lsotype: IgG	UNIPROT ID: Q9UJU2		
	Immunogen Catalog Number: AG6882	Full Name: lymphoid enhancer-binding factor 1		
		Calculated MW: 37 kDa		
		Observed MW: 50-55 kDa, 65 kDa		
Applications	Tested Applications:	Positive Controls:		
	WB, IP, ELISA	WB : Jurkat cells, COLO 320 cells, NCCIT cells		
	Cited Applications: WB, IHC, IF, IP	IP : SW 1990	IP : SW 1990 cells,	
	Species Specificity: human			
	Cited Species: human, mouse, rat, rabbit			
	mobility group protein-1, and it's a nuclear protein expressed in pre-B and T cells. LEF 1 has a role in the Wnt signaling pathway hair cell differentiation and follicle morphogenesis. Together with CTNNB1 and EP300, LEF1 activates transcription of target genes. Isoform 5 transcriptionally activates the fibronectin promoter, binds to and represses transcription from the E-cadherin promoter in a CTNNB1-independent manner, and is involved in reducin cellular aggregation and increasing cell migration of pancreatic cancer cells. Isoform 1 transcriptionally activates MYC and CCND1 expression and enhances the proliferation of pancreatic tumor cells. MECs can give rise to seven cell types of the SAE and SMGs following severe airway injury. MECs progressively adopted a basal cell phenotype on the SAE and established lasting progenitors capable of further regeneration following reinjury. MECs activate Wnt-regulated transcription factors (Lef-1/TCF7) following injury and Lef-1 induction in cultured MECs promotes transition to a basal cell phenotype. Surprisingly, dose-dependent MEC conditional activation of Lef-1 transcriptionaprogram in MEC-derived progenitors may have regenerative medicine applications for lung diseases. (https://doi.org/10.1016/j.stem.2018.03.017) The phosphorylation may affect the LEF1 protein's theoretical molecular weight when tested.40-70 kD bands have also been reported (PMID: 22261717; 17063141).			
	cell types of the SAE and SMGs for on the SAE and established lastin Wnt-regulated transcription factor transition to a basal cell phenoty vivopromoted self-limited airway program in MEC-derived progenit (https://doi.org/10.1016/j.stem.20	llowing severe airway injury. MECs prog g progenitors capable of further regener rs (Lef-1/TCF7) following injury and Lef- be. Surprisingly, dose-dependent MEC co y regeneration in the absence of injury. ors may have regenerative medicine ap 018.03.017) The phosphorylation may a	ation following reinjury. MECs activate 1 induction in cultured MECs promotes onditional activation of Lef-1in Thus, modulating the Lef-1 transcription plications for lung diseases. ffect the LEF 1 protein's theoretical

Ffect the LEF 1 protein's theoretical MID: 22261717; 17063141). Application	

This product is exclusively available under Proteintech Group brand and is not available to purchase from any other manufacturer.

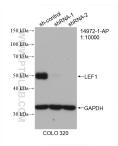

Selected Validation Data

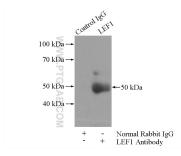

WB result of LEF1 antibody (14972-1-AP; 1:600; incubated at room temperature for 1.5 hours) with sh-Control and sh-LEF1 transfected Jurkat cells.

Various lysates were subjected to SDS PAGE followed by western blot with 14972-1-AP (LEF 1 antibody) at dilution of 1:2000 incubated at room temperature for 1.5 hours.

WB result of LEF 1 antibody (14972-1-AP; 1:10000; incubated at room temperature for 1.5 hours) with sh-Control and sh-LEF 1 transfected COLO 320 cells.

IP result of anti-LEF1 (IP:14972-1-AP, 4ug; Detection:14972-1-AP 1:300) with SW 1990 cells lysate 2400ug.
