Background Information	Golgi phosphoprotein 2 (GOLPH2, also known as GP73 or GOLM1) is a resident Golgi type-II membrane protein. It is predominantly expressed in the epithelial cells of many human tissues. GOLPH2 traffics through endosomes and can be secreted into the circulation. Its expression is upregulated in a number of tumors and GOLPH2 could be a promising serum marker for hepatocellular carcinoma. We got 70-75 kDa in western blotting due to phosphorylation.

Selected Validation Data

Various lysates were subjected to SDS PAGE followed by western blot with 15126-1-AP (GP73/GOLPH2 antibody) at dilution of 1:4000 incubated at room temperature for 1.5 hours.

Immunofluorescent analysis of (4% PFA) fixed HeLa cells using 15126-1-AP (GP73/GOLPH2 antibody), at dilution of 1:400 and Coralite® 488-Conjugated AffiniPure Goat Anti-Rabbit IgG(H+L). The cytoskeleton and nuclei were stained with CL594-phalloidin and DAPI, respectively.

Various lysates were subjected to SDS PAGE followed by western blot with 15126-1-AP (GP73/GOLPH2 antibody) at dilution of 1:20000 incubated at room temperature for 1.5 hours.
