Background Information

Rabphilin-3A-like (RPH3AL), also known as Noc2, is a Rab effector protein with a molecular weight of 38 kDa. It is expressed abundantly in endocrine cells but at low levels in exocrine tissues, playing a direct regulatory role in calcium-ion-dependent exocytosis in both endocrine and exocrine cells, and also having a key role in INS secretion by pancreatic cells. RPH3AL functions as a potential RAB3B effector protein in epithelial cells, and RPH3AL gene is likely a tumor suppressor.
