Background Information

Modulator of apoptosis 1 (MOAP1, also known as MAP-1 and PNMA4) belongs to the PNMA family and is expressed in various types of tissues (PMID: 36724555). MAP1 contains a central BH3-like motif and interacts with the BAX protein (PMID: 11060313). It plays a central role in mitochondria and death receptor-mediated apoptosis and is associated with many diseases such as cancers and neurological diseases (PMID: 35269511).
