Background Information

CHRDL1, also known as Chordin-like 1, is a gene located on the X chromosome that encodes a protein which acts as an antagonist of bone morphogenetic proteins (BMPs). BMPs are involved in various developmental processes, and CHRDL1's role in antagonizing them is crucial for proper development and homeostasis. Mutations in CHRDL1 can lead to conditions like X-linked megalocornea.

Selected Validation Data

Various lysates were subjected to SDS PAGE followed by western blot with 15390-1-AP (CHRDL1 antibody) at dilution of 1:600 incubated at room temperature for 1.5 hours. This data was developed using the same antibody clone with 15390-1-PBS in a different storage buffer formulation.
