Background Information

CAPs (CAP1 and CAP2) are evolutionarily conserved proteins with roles in regulating the actin cytoskeleton and in signal transduction. CAP2 is predominantly expressed in brain, heart and skeletal muscle, and skin. It is found in the nucleus in undifferentiated myoblasts and at the M-line of differentiated myotubes. Overexpression of CAP2 has been reported in many cancers, including hepatocellular carcinoma (HCC), human breast cancer, and malignant melanoma.
