Background Information

PSENE1, also named PEN2, is a component of the gamma-secretase complex, which also includes presenilin (PSEN1) and nicastrin (NCSTN). The gamma-secretase complex is required for the intramembrane proteolysis of a number of membrane proteins, including the amyloid-beta precursor protein (APP) and Notch. PSENE1 is required for Notch pathway signaling, and for the activity and accumulation of gamma-secretase. Mutations resulting in haploinsufficiency for this gene cause familial acne inversa-2 (ACNINV2).
