## Background Information

This gene encodes the class II alcohol dehydrogenase 4 pi subunit, which is a member of the alcohol dehydrogenase family. Members of this enzyme family metabolize a wide variety of substrates, including ethanol, retinol, other aliphatic alcohols, hydroxysteroids, and lipid peroxidation products. Class II alcohol dehydrogenase is a homodimer composed of 2 pi subunits. ADH4 plays a critical role in alcoholism development and alcohol toxicology and is also associated with the development of esophageal cancer(PMID:33556337, 26039424, 24051444, 22147505).
