Background Information

Sperm binding proteins and their C-terminal peptides of the Sperm Associated Antigen 11 (SPAG11) family are found to play an important role in epididymal innate immunity in addition to their role in sperm maturation (PMID:16643671). SPAG11 peptides resulting due to cleavage at the furin-like proprotein convertase motif are reported in the epididymal fluid, ejaculate and on sperm and their antimicrobial activity demonstrated. SPAG11A belongs to this family and is also named as EP2, HE2. It has 4 isoforms produced by alternative splicing. This antibody is specific to SPAG11.
