| Background Information                    | DCTD(Deoxycytidylate deaminase) is also named as dCMP deaminase and belongs to the cytidine and deoxycytidylate deaminase family. It catalyzes the deamination of dCMP to dUMP, thus providing the nucleotide substrate for thymidylate synthase. Control of deaminase activity at this juncture in deoxyribonucleotide metabolism is determined by the ratio of dCTP to dTTP in the cell, since the enzyme is allosterically activated by dCTP and inhibited by dTTP(PMID:7685356). It has 2 isoforms produced by alternative splicing and can exsit as a dimer(pMID:8798492). |   |  |                                      |                                  |  |
| Notable Publications                      | Author  | Pubmed ID Journal   | Application  |                                      |                                  |  |
|   | Nao Yoshida-Sakai   | 34913485 Int J Cancer   | WB   |                                      |                                  |  |
| Storage                                   | Storage:<br>Store at -20°C. Stable for one year after shipment.<br>Storage Buffer:<br>PBS with 0.02% sodium azide and 50% glycerol pH 7.3.<br>Aliquoting is unnecessary for -20°C storage   |   |  |                                      |                                  |  |

This product is exclusively available under Proteintech Group brand and is not available to purchase from any other manufacturer.

## Selected Validation Data

human brain tissue were subjected to SDS PAGE followed by western blot with 16784-1-AP (DCTD antibody) at dilution of 1:500 incubated at room temperature for 1.5 hours. Immunofluorescent analysis of (-20°C Ethanol) fixed HepG2 cells using DCTD antibody (16784-1-AP) at dilution of 1:200 and CoraLite®488-Conjugated AffiniPure Goat Anti-Rabbit IgG(H+L) (SA00013-2), CL594-phalloidin (red).
