PIK3IP1 Polyclonal antibody

Catalog Number:16826-1-AP

Featured Product

13 Publications

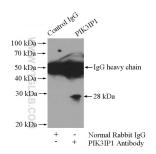

Basic Information	Catalog Number: 16826-1-AP	GenBank Accession Number: BC011049	Purification Method: Antigen affinity purification
	Size: 650 µg/ml	GenelD (NCBI): 113791	Recommended Dilutions: WB 1:500-1:2000
	Source: Rabbit	UNIPROT ID: Q96FE7	IP 0.5-4.0 ug for 1.0-3.0 mg of total protein lysate
	Isotype: IgG Immunogen Catalog Number: AG10427	Full Name: phosphoinositide-3-kinase interacting protein 1	
		Calculated MW: 263 aa, 28 kDa	
		Observed MW: 37 kDa	
Applications	Tested Applications:	Positive Controls:	
	IP, WB,ELISA Cited Applications: WB, IF, CoIP	WB : HeLa cells, HepG2 cells, mouse liver tissue IP : HeLa cells,	
	Species Specificity: human, mouse, rat		
	Cited Species: human, chicken, rat, mouse, bovir	ne	
Background Information	PIK3IP1(Phosphoinositide-3-kinase-interacting protein 1) is also named as HGFL. The class IA phosphoinositol-3- kinases (PI3Ks) regulate important cellular processes such as proliferation, growth, survival, motility and metabolism. PIK3IP1 is a transmembrane protein that possesses a region in its intracellular domain that shares homology with the p85 regulatory subunit of PI3K. It has 5 isoforms produced by alternative splicing with the MW of 11, 18, 19, 25,28 kDa. PIK3IP1 undergoes N- and O-linked amino acid glycosylation. The major glycosylated form of PIK3IP1 migrates at about 43 kDa in western blot analysis, while the unglycosylated form migrates at 37 kDa. It is also detected a 65 kDa variant in HepG2 cell lysate that PIK3IP1 is indeed membrane bound and that these variant arise from alternative splicing and/or post-translational processing events such as enzymatic proteolysis and/or glycosylation. (PMID:18632611).		
-	11, 18, 19, 25,28 kDa. PIK3IP1 und PIK3IP1 migrates at about 43 kDa also detected a 65 kDa variant in arise from alternative splicing an	ergoes N- and O-linked amino acid g in western blot analysis, while the u HepG2 cell lysate that PIK3IP1 is ind	lycosylation. The major glycosylated form o nglycosylated form migrates at 37 kDa. It is eed membrane bound and that these variant

This product is exclusively available under Proteintech Group brand and is not available to purchase from any other manufacturer.

Selected Validation Data

HeLa cells were subjected to SDS PAGE followed by western blot with 16826-1-AP (PIK3IP1 antibody) at dilution of 1:500 incubated at room temperature for 1.5 hours.

IP result of anti-PIK3IP1 (IP:16826-1-AP, 4ug; Detection:16826-1-AP 1:500) with HeLa cells lysate 3200ug.
