Background Information

GPR132, also known as G2A (G2 accumulation protein), belongs to the G-protein coupled receptor (GPCR) 1 family. GPR132 is a DNA damage and stress inducible GPCR that blocks cells in G2/M. It functions at the G2/M checkpoint to delay mitosis and may serve as a mechanism for T and B cells and other cell types to slow their proliferation and repair damaged DNA to ensure proper replication (PMID: 9770487). Lysophosphatidylcholine (LPC) is a high affinity ligand for GPR132 (PMID: 15653487).
