Background Information

ZNF22, also named as Zinc finger protein 22, is a 224 amino acid protein, which contains 5 C2H2-type zinc fingers and belongs to the krueppel C2H2-type zinc-finger protein family. In the embryo, ZNF22 is expressed in developing craniofacial structures including dental epithelium of maxillary molar tooth organs, tongue epithelium and muscle, and craniofacial bone osteoblasts. In the adult, ZNF22 is expressed in mesoderm-derived tissues such as skeletal muscle, heart, kidney and liver. Intermediate expression in spleen, thymus and brain. ZNF22 binds DNA through the consensus sequence 5'-CAATG-3' and may be involved in transcriptional regulation and may play a role in tooth formation.
