Background Information

MED20(Mediator of RNA polymerase II transcription subunit 20) is also named as TRFP and belongs to the Mediator complex subunit 20 family. The deduced 209-amino acid protein shares 44% amino identity with Drosophila Trfp. TRFP had an apparent molecular mass of 28 kD by SDS-PAGE. It is identified TRFP as a component of an RNA polymerase II-SRB complex. The TRFP-containing complex could substitute for core RNA polymerase II in driving basal transcription from a minimal promoter.
