Background Information

VeZatin (VEZT) is an adherens junctions transmembrane protein which identified as a putative tumor suppressor. In case of Listeria infection, it promotes bacterial internalization by participating in myosin VIIa recruitment to the entry site. There're two isoforms with calculated MW 89 kDa and 65 kDa. With modification or glycosylation, the MW in Western blot detection will be presented as ~125 kDa and ~89 kDa (PMID: 11080149) or 65-71 kDa and 88-100 kDa (PMID: 20049712). There're some isoforms with MW less than 70 kDa.
