Background Information

Glycodelin (also known as Progesterone Associated Endometrial Protein, PAEP, and Placental Protein 14, PP14) is a secreted human lipocalin-family protein mainly expressed in well-differentiated epithelial cells in human reproductive tissues, like endometrium and seminal vesicles. While different cells produce differentially glycosylated isoforms of Glycodelin: decidualized endometrium-derived glycodelin-A (GdA), seminal vesicle-derived glycodelin-S (GdS), glycodelin-F (isolated from follicular fluid), and glycodelin-C (isolated from cumulus cells). Glycodelin has been involved in cell differentiation and tumor growth.
