Background Information

HOXD13, also named as HOX4l, belongs to the Abd-B homeobox family. HOXD13 is a sequence-specific transcription factor which is part of a developmental regulatory system that provides cells with specific positional identities on the anterior-posterior axis. Mutation of HOXD13 will cause synpolydactyly (SPD), brachydactyly type D (BDD), syndactyly type 5brachydactyly-syndactyly syndrome (BDS5) or brachydactyly type E (BDE). Present polyclonal anti-HOX13D antibody(18736-1-AP) is produced by immunizing animals with part of N-terminus chain of HOX13D and detect a 36-kDa band in cell and tissues.
