						COL4A4 belongs to the type IV collagen family. COL4A4 is the major structural component of glomerular basemen membranes (GBM), forming a 'chicken-wire' meshwork together with laminins, proteoglycans and entactin/nidoger Defects in COL4A4 are a cause of Alport syndrome autosomal recessive (APSAR). Defects in COL4A4 are a cause of benign familial hematuria (BFH). This antibody is specific to COL4A4.
